EDUCATION

Carleton University — B.Eng. Computer Systems Engineering (Co-op) • Sept 2023 - Apr 2028 • Third Year • Dean's Honour List • Golden Key International Honour Society

EXPERIENCE

Department of National Defence

Software Development Co-op Student - Ottawa, ON

Mar 2026 - Present

- Built model-driven PowerApps solutions to support internal workflow tools, applying maintainable logic and contributing to reliable, user-focused features.
- Automated task routing and approvals with Power Automate to remove repetitive steps, saving **50+ hours/month** and reducing errors.
- Collaborated with stakeholders to define **UI requirements** and connect front-end components to underlying data flows, applying **secure data-handling** practices to improve clarity and system reliability.

TechInsights

Software Development Co-op Student - Ottawa, ON

May 2025 - Aug 2025

- Developed a secure SSO-enabled KPI dashboard using Retool and Auth0, improving data accessibility and reinforcing **REST API**-driven workflows.
- Implemented Angular/TypeScript features to enhance front-end functionality, contributing production-ready code through Git-based workflows (pull requests, reviews, merges).
- Collaborated with UX and QA teams to refine UI components, improving accessibility, responsiveness, and overall user experience.
- Participated in Agile ceremonies, strengthening communication, iterative development, and cross-functional collaboration.

PROJECTS

Personal Portfolio Website - *React • TypeScript • Vite • Tailwind CSS*

- Designed a responsive, animated portfolio to showcase projects, improving engagement through interactive UI elements.
- Integrated EmailJS with protected API keys to ensure secure and reliable form submissions.

Temperature & Humidity App - *Flutter • Python • Raspberry Pi*

- Built a sensor-driven monitoring system to display **continuous environmental data** through a Flutter interface.
- Developed Python scripts to read sensor data and host a lightweight web server, demonstrating backend logic, debugging, **hardware interaction**, and client-server concepts.

Password Security Project - *Python*

- Developed a password-checking tool referencing cracked password databases to assess vulnerability, applying input-validation and problem-solving techniques.

SKILLS

Programming: Python, JavaScript, TypeScript • **Backend & APIs:** REST API integration, lightweight server development, client-server fundamentals • **Distributed & Systems Concepts:** Windows, Linux, debugging workflows, continuous data monitoring • **Tools:** Git, Jira, Bitbucket, Copilot/LLMs • **Software Development:** debugging, workflow automation, documentation, UML, flowcharts • **Collaboration:** Agile Scrum, cross-functional teamwork, clear written communication
